Novartis receives EU approval for Bexsero®, first vaccine to prevent the leading cause of life-threatening meningitis across Europe

- **Bexsero is indicated to help protect all age groups against meningococcal serogroup B (MenB) disease, including infants who are the most vulnerable**

- **MenB disease is associated with a high human toll for families and communities, as it can be fatal or may cause serious, life-long disabilities in survivors**

- **Novartis is working with health authorities to provide access to Bexsero as soon as possible**

**Basel, January 22, 2013** – Novartis announced today that the European Commission has approved Bexsero® (Meningococcal Group B Vaccine [rDNA, component, adsorbed]) for use in individuals from 2 months of age and older. Novartis is committed to making Bexsero available as soon as possible.

“This meningitis B vaccine is the most important medical breakthrough in the 30 years since I lost my son to the disease,” said Meningitis UK Founder Steve Dayman MBE. “It could save thousands of lives and prevent other parents suffering the same tragedy. The vaccine must be made widely available through the immunisation schedule as soon as possible – any delay could mean lives lost.”

MenB disease is a bacterial infection and is the leading cause of meningitis across Europe, particularly in infants. Although rare, one reason this disease is so feared is that it affects healthy people rapidly and without warning. Symptoms can often resemble the flu, making this disease easily misdiagnosed in its early stages. In many cases, doctors simply cannot treat infected patients soon enough to avoid serious outcomes. About one in ten of those who contract the disease will die despite appropriate treatment. Up to one in five survivors may suffer from devastating, life-long disabilities such as brain damage, hearing impairment or limb loss. Prevention through vaccination is therefore the best defense against this aggressive disease.

“Each year, thousands of parents see their children die or left with severe disabilities as a result of this devastating disease. Through the combined efforts of many people over two decades, we are closer than ever to seeing an end to this suffering,” said Andrin Oswald, Division Head, Novartis Vaccines and Diagnostics. “Our vision is a world without meningitis, and our priority is to work with decision makers across Europe to ensure there is broad and timely access to vaccination.”

Following today’s approval, EU member states will evaluate Bexsero for potential inclusion into national immunization programs and, where relevant, reimbursement schemes. Novartis is already engaging with governments interested in the early adoption of the vaccine.

Bexsero is the result of more than 20 years of pioneering vaccine research, and its tolerability profile and immunogenicity have been established through a comprehensive clinical program involving infants, children, adolescents and adults. Starting at
two months of age, Bexsero offers several immunization schedule options that could fit with routine vaccination visits.

The approval of Bexsero underscores the unique leadership position of Novartis in the global fight against devastating meningococcal disease. Together, Bexsero and Menveo® help to protect against all five main serogroups of meningococcal bacteria (A, C, W-135, Y and now B) that cause the majority of cases around the world13.

Disclaimer
The foregoing release contains forward-looking statements that can be identified by terminology such as "as soon as possible," "committed," "could," "vision," "priority," "will," "potential," or similar expressions, or by express or implied discussions regarding the potential timing of the availability of Bexsero to the public, or regarding potential future revenues from Bexsero. You should not place undue reliance on these statements. Such forward-looking statements reflect the current views of management regarding future events, and involve known and unknown risks, uncertainties and other factors that may cause actual results with Bexsero to be materially different from any future results, performance or achievements expressed or implied by such statements. There can be no guarantee that Bexsero will be available to the public in any particular country at any particular time. Nor can there be any guarantee that Bexsero will achieve any particular levels of revenue in the future. In particular, management’s expectations regarding Bexsero could be affected by, among other things, unexpected regulatory actions or delays or government regulation generally, including uncertainties as to whether Bexsero will be included in particular countries’ national immunization programs; unexpected clinical trial results, including unexpected new clinical data and unexpected additional analysis of existing clinical data; government, industry and general public pricing pressures; unexpected manufacturing issues; the company’s ability to obtain or maintain patent or other proprietary intellectual property protection; the impact that the foregoing factors could have on the values attributed to the Novartis Group's assets and liabilities as recorded in the Group’s consolidated balance sheet, and other risks and factors referred to in Novartis AG’s current Form 20-F on file with the US Securities and Exchange Commission. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those anticipated, believed, estimated or expected. Novartis is providing the information in this press release as of this date and does not undertake any obligation to update any forward-looking statements contained in this press release as a result of new information, future events or otherwise.

About Novartis
Novartis provides innovative healthcare solutions that address the evolving needs of patients and societies. Headquartered in Basel, Switzerland, Novartis offers a diversified portfolio to best meet these needs: innovative medicines, eye care, cost-saving generic pharmaceuticals, preventive vaccines and diagnostic tools, over-the-counter and animal health products. Novartis is the only global company with leading positions in these areas. In 2011, the Group’s continuing operations achieved net sales of USD 58.6 billion, while approximately USD 9.6 billion (USD 9.2 billion excluding impairment and amortization charges) was invested in R&D throughout the Group. Novartis Group companies employ approximately 127,000 full-time-equivalent associates and operate in more than 140 countries around the world.
